

Offerings Overview

Desktop to Data Center Linux

SUSE Linux Enterprise is the best-engineered, most interoperable platform for mission-critical computing, from the desktop to the data center. Our server product line offers built-in virtualization technology and supports your line-of-business applications in your data center. With SUSE Linux Enterprise Server, you can reduce licensing costs, consolidate servers and support your mission-critical applications. SUSE Linux Enterprise Desktop offers all of the functionality and usability needed by the general office worker at a fraction of the price of proprietary desktop solutions.

Virtualization

Virtualization from Novell® offers open source, operating system-based virtualization with cross-platform systems management. It is the most robust and best-supported open source virtualization solution for Windows server consolidation. When you deploy virtualization solutions using Novell technology, you get full interoperability with your existing IT infrastructure and an integrated suite of tools for virtualization management and automation. Only Novell offers the ability to virtualize Linux®, Windows and NetWare® on one common platform with complete support for all three operating systems. As a result, you gain the flexibility to reconfigure your applications and systems to increase server utilization without impacting performance. It's a solution that maximizes efficiency and reduces your total cost of ownership.

Identity and Security Management

Novell solutions enable your line-of-business owners to maintain control of their data while you free IT resources to focus on strategic projects, control infrastructure, and enforce business policies and mandates. And we allow you to do all of this without ripping and replacing your existing systems and processes. By helping unite groups throughout an organization and by helping to strengthen the existing infrastructure and business environment—our solutions create more powerful protection from outside threats.

Systems Management

Novell can help make your IT work as one by providing an IT infrastructure that aligns to your business needs and helps you control costs with lower operational and financial risk. With Novell ZENworks(r) we provide a cross-platform systems management suite that helps you automate the management of the IT resources your people use, including network assets, operating systems, devices, applications and other IT resources. With the addition of PlateSpin(R), Novell can provide the freedom and agility to cross physical and virtual infrastructure boundaries to enable IT to work as one.

Collaboration

Novell combines 25 years of expertise in collaboration software with new tools to enable the flow of creative ideas to help fuel your success. With our proven focus on interoperability you can count on IT systems that work together and productive teamwork that delivers powerful results.
